

# Juniper Torulosa

*juniperus chinensis 'Torulosa'*

*Torulosa Juniper potted*

'Torulosa' is frequently referred to by its common name, Hollywood Juniper. The asymmetrical crown of finetextured, deep green foliage creates undeniable drama for each specimen in the landscape. Torulosa will produce a useful accent anywhere its unique form is appreciated.

Design ideas are abundant for this classic form of rich green color: entryways, corners of homes and commercial buildings, blank walls between buildings, informal hedges, patio container plantings, Mediterranean themes and Sante Fe style gardens. Torulosa is also frequently sculpted into various forms of topiaries to further compliment a specific landscape theme or application.

The cultural attributes of Torulosa lend itself for use where environmental conditions are more difficult for other tree species to thrive. Capable of tolerating high levels of aerosol and soil salt conditions, Torulosa does remarkably well in coastal environments. Other attributes that account for its adaptability to harsh environments include its ability to withstand heat and cold conditions within hardiness zones 5B to 11. Aesthetically and environmentally, there are many reasons that justify the Torulosa's performance in the landscape.

#### Common Names:

Torulosa

#### Native Origin :

China, Mongolia, Japan

#### Environment:

Soil: Sand, loam, clay,  
well-drained, acidic,  
alkaline  
Salt: Medium  
Exposure: full sun to  
partial sun

#### Description:

Hardy Range: 5B - 11  
Mature Height: 15 - 20'  
Mature Spread: 8 - 12'  
Growth Rate: 8 to 10  
years to maturity  
Form: pyramidal and  
upright or erect  
Persistence: evergreen

#### Ornamental Characteristics:

Twisted growth habit. The flowers are inconspicuous. Blooms are brown and yellow, insignificant and appear in Spring. Leaf color is green with no change in fall. This plant has fragrant foliage. Fruit color is blue, dry, oval, round and inconspicuous, although it rarely fruits.

Full Sun

Low drought  
tolerance
